° 100 Gps Network Capability
- 70M Streaming Sessions Per Day

The Foundation For Your Digital Audio Strategy

Software Designed for Flexibility and Control

Whether you choose to use our delivery network, your own infrastructure, or a third-party CDN, our streaming software is optimized to support your digital audio strategy, and to help you leverage the power of dynamic, server-side ad insertion to generate revenue from your live, on demand, and podcast streaming content. Learn More...

HLS Compatible Audio Ad Delivery

Seamlessly advertise to your audience using our ad-stitching platform, Triton Advertising Platform (TAP), with our HLS compatible streaming technology.

Programmatic Audio Ad Delivery

Automatically insert and distribute advertisements while matching and maintaining your stream's audio quality. Our flexible CDN allows us to work with multiple transcoding formats to ensure compatability for your output methods.

Compatibility with all major playout systems

for advanced now playing and itemised targeted spot replacements

Reliable Stream Delivery Backup

Provide the highest quality streams for your audience with uninterrupted service everytime. Should you experience local CDN failure or maximum capacity for large events, our fail-safe technology will be automatically triggered to immediatley begin distributing content.
