SAM Broadcaster Cloud

Triton Digital now offers Spacial Audio's SAM Broadcaster Cloud Enterprise, a robust, easy to implement radio automation solution for small radio broadcasters and web-only, audio streaming publishers.

## Easily Create and Monetize Your Audio Streams

Cloud-Based

SAM Broadcaster Cloud allows you to upload your content, set rotation rules, tasks and playblocks… and then shut down your computer! You can relax knowing SAM Broadcaster Cloud is keeping your station running 24/7 even if you are not around to operate it. No servers or staff necessary! It's the easiest way to create an online radio station.

Live Streaming

Live streaming now allows you to stream live shows using SAM Broadcaster Live DJ. Your SAM Broadcaster Live DJ connects to your SAM Broadcaster Cloud and allows you to host talk shows or stream live shows or events easily and automatically using your SAM Broadcaster Cloud streaming configuration. When done, just switch back to SAM Broadcaster Cloud to stream your automated content. Your listeners won't notice the difference. Also, if your live stream drops for any reason the cloud takes over to ensure your station is never down.

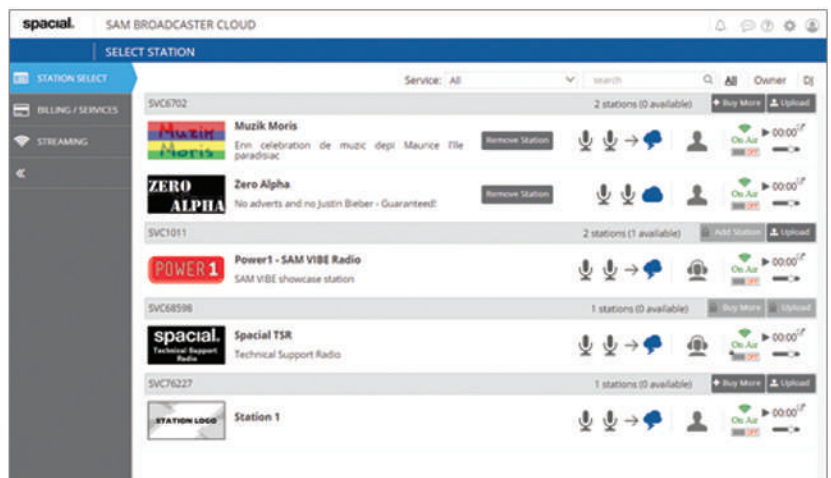

Web Integration

Need to embed a player or web widgets on your website? Looking to give your station website a professional look? Our easy to integrate web and player widgets are there to help you out. Keep your listeners engaged, show them "now playing" info and let them browse your media library and even request and dedicate a song!

What it includes:

- 1 Station
- Live and Cloud Streaming
- Responsive Players and Widgets
- Live Campaign Management
- Yield-Op SSP for Managing Programmatic Sales
- On Demand Analytics Tools
- Ability to Share Libraries Between Stations
- 50GB of Storage
- Automatic Fall-Back Station for Live Broadcast Disconnections
- Advanced Audio Processing
- Royalty Reporting
